

PROJECT

A wearable NFC wristband system protecting children with disabilities
in Ulaanbaatar's special education schools — and beyond.

THE PROBLEM

Children with disabilities face invisible dangers every day

Cannot communicate

Many nonverbal children cannot describe symptoms, their name, or who to call in a crisis.

Risk of wandering

Children with autism and cognitive disabilities frequently wander — getting lost with no ID.

Hidden medical needs

Allergies, epilepsy, diabetes: first responders have no way to know without a record in hand.

No real-time info

Parents have no confirmation a child arrived, left, or is safe — manual paper systems fail.

WHY MONGOLIA?

The numbers behind the need

115,000

Introducing **OneTag** Project Band

NFC Silicone Wristband

- ✓ Waterproof silicone — safe for children
- ✓ Embedded NFC chip
- ✓ "TAP HERE" printed on surface
- ✓ No battery. No charging. Ever.
- ✓ Works with any NFC smartphone
- ✓ No app needed to scan
- ✓ GPS location

When tapped by any phone:

- 1 Child's name & school
- 2 Guardian's call button shown
- 3 Allergies & medications listed
- 4 Medical conditions shown
- 5 Attendance automatically logged (At School)
- 6 Real time GPS (Location)

No app. No subscription. No battery. Just safety.

EMERGENCY PROTECTION

Critical information — the moment it matters

Real scenario

A 7-year-old nonverbal child is found lost on a street in Ulaanbaatar.

A stranger taps the OneTag wristband with their phone — in 2 seconds they see the child's name, photo, and a single big button:  Call Guardian.

Call Guardian Now

Phone number never shown publicly — privacy protected

Any phone tap instantly shows:

Child's name

Blood type

Allergies & medications

Medical conditions

Emergency contacts

School & class

Location

HOW IT WORKS?

A safe arrival and a safe departure — automatically

MORNING — ARRIVAL

Child taps wristband
at school gate

Attendance recorded
automatically

Parent notified instantly:
"Child arrived safely"

AFTERNOON — DEPARTURE

Child taps wristband
on leaving school

Departure recorded
automatically

Parent notified instantly:
"Child has left school"

Project's Target

6

Special schools

All 6 in Ulaanbaatar

≈1,800

Students protected

Full coverage

Who benefits:

Direct beneficiaries

Students with disabilities · Parents & guardians
· Teachers & aides · School administrators

Indirect beneficiaries

Emergency & medical responders · Ministry of Education ·
Local communities · Future pilot sites nationwide

Rotary's Areas of Focus

Basic Education & Literacy

Keeping every child engaged and
in school

Maternal & Child Health

Safer, healthier outcomes for
children

Disease Prevention & Treatment

Rapid access to medical
information

Disability Inclusion

Designed for the most vulnerable
students

Community Development

Modern infrastructure for public
schools

BUDGET

Item	USD
NFC Wristbands (1,800 units * 15 USD)	\$27,000
Gate reader devices 6 schools (24 units*250 USD)	\$6,000
Cloud platform & software build & hosting (5-year cloud server)	\$6,800
TOTAL	\$39,800

Cost per child protected: ~\$20

Built to scale across all of Mongolia

Together, we can build safer schools.

OneTag Project is more than technology.

Protect
Every Child

Empower
Every Parent

Strengthen
Every School

*"Every child deserves to arrive at school safely, leave safely,
and receive immediate help during an emergency.
OneTag turns that promise into a daily reality."*
